

Sample Customer Workload Assessment

This sample document is designed to test AI document ingestion, Markdown conversion using Markdown, and workload extraction.

Project Overview

Customer: Contoso Retail Ltd.

Project: Enterprise Analytics Modernization

Current Environment

Source Systems:

- SAP ECC
- SQL Server (12 databases)
- Oracle ERP
- SharePoint Excel files
- REST APIs

Data Volume

Daily data processed: **520 GB/day**

Historical data: 18 TB

Monthly growth: 250 GB

Power BI

Peak concurrent users: **180**

Reports: 95

Semantic Models: 18

Refresh frequency: Hourly

Engineering

Stored Procedures: 245

SQL Views: 180

Spark Notebooks: 22

Data Factory Pipelines: 34

ETL Pipelines: 41

Machine Learning

Python Notebooks: 12

MLflow Experiments: 8

GPU Workloads: None

Storage

Bronze Layer: 6 TB

Silver Layer: 3 TB

Gold Layer: 1 TB

Team Skills

Primary Skills: SQL, Power BI

Secondary Skills: Python, Spark

Processing Pattern: Hourly batch with limited near real-time workloads

Assessment Objective

The organization is evaluating Microsoft Fabric and Azure Databricks for its future analytics platform. The goal is to estimate platform fit, expected monthly cost, and migration complexity.
